Processing Guidelines

Printing guidelines

It is recommended to handle the media with cotton gloves Make sure that the media comes not into contact with grease, oil, silicon, and dirt to avoid printing defects. Insert media with care in the printers. Incorrect loading can cause skewing or creasing. Allow material to adapt to room conditions for 24 hours before printing. It is recommended to calibrate the printer before printing and to make a test print. Print results will vary for different printers.

Ink/toner restrictions and printer settings have to be set for specific printers to obtain the best results. Canon colour profiles include recommended ink restrictions and printer settings for Canon supported printers.

Finishing guidelines

When laminating Océ CrystalPoint® prints pressure sensitive laminates are recommended.
A laminator with soft rubber rollers is preferred.
For optimal results temperature should be set between 55-60°C.
